ABOUT

I build backend services in Python and FastAPI and have over a year of backend development experience. I developed REST APIs, business logic, and PostgreSQL data models, and wrote automated tests with pytest. I understand deployment processes (Docker, CI/CD) and the pain points frontend developers face, so I strive to design user-friendly APIs. I also built and maintain **Kantano** (kantano.ru), a production project with JWT authentication, role-based access control, WebSocket, Redis Pub/Sub, CI/CD, and Docker deployment. Open to remote, hybrid, and relocation opportunities.

SKILLS

Python

FastAPI

Pydantic

asyncio

SQLAlchemy (async)

PostgreSQL

Alembic

Redis

WebSocket

Docker / Docker Compose

Nginx

GitHub Actions

pytest

Ruff

REST API / OpenAPI

JWT / OAuth2

Vue 3

TypeScript

Django (basic)

Linux

Git

EXPERIENCE

Backend Developer - Overlang-IT

May 2025 - Jun 2026 · Python, FastAPI, PostgreSQL, SQLAlchemy, pytest, Docker, CI/CD, Redis

- Developed REST API and verification business logic for an automated diploma and coursework compliance verification service based on GOST standards
- Designed PostgreSQL data models and implemented queries using SQLAlchemy
- Set up automatic TypeScript client generation from the OpenAPI schema to simplify backend/frontend integration
- Covered functionality with unit and integration tests (pytest) using an isolated test database
- Supported the project's Docker environment and CI/CD pipelines
- Fixed bugs, refactored the codebase, and participated in code reviews

PROJECTS

Kantano - Kanban Task Manager · kantano.ru · github.com/llm1n/Kantano

FastAPI · PostgreSQL · Redis · WebSocket · Docker · GitHub Actions · Vue 3

- Designed the backend architecture from scratch with 38 FastAPI endpoints, async SQLAlchemy, and Alembic migrations
- Implemented JWT authentication (access/refresh cookies) and OAuth login via Yandex ID
- Built a role-based permission system (OWNER / MANAGER / MEMBER) with QR-code invitations
- Implemented real-time communication using WebSocket and Redis Pub/Sub as a message bus
- Wrote 144 unit and integration tests (pytest, FastAPI TestClient) covering all core business logic
- Configured Ruff, basedpyright, and pre-commit for code quality checks
- Built a CI/CD pipeline with GitHub Actions and deployed the application using Docker Compose and Caddy with automatic HTTPS via Let's Encrypt
- Developed the frontend with Vue 3, Pinia, and Vite with a TypeScript client generated from the OpenAPI schema

EDUCATION

AUGSAP (АУГСГПИ) - Information Systems and Programming (09.02.07)

Vocational Education · Class of 2026

LANGUAGES

Russian - Native · English - B2 (Technical documentation reading)
