SUMMARY

Backend Developer with over a year of experience building and supporting services with Python/FastAPI. Design APIs and data models, work with PostgreSQL, Redis, and task queues, and write unit and integration tests. Independently launched and maintain Kantano, a production service for collaborative task management.

EXPERIENCE

Backend Developer - Overleng-IT LLC

May 2025 - June 2026

Academic paper compliance service · Python, FastAPI, PostgreSQL, Redis, RabbitMQ, Celery

- Built REST APIs and business logic with FastAPI for key thesis and term-paper workflows, enabling automated compliance checks against GOST requirements.
- Designed PostgreSQL models and implemented SQLAlchemy queries for new service functionality.
- Moved academic-paper checks to Celery/RabbitMQ: the API now returns a task ID in under 1 second instead of waiting 30–60 seconds for processing.
- Automated typed TypeScript client generation from OpenAPI, reducing backend–frontend API contract synchronization from 20–25 minutes of manual edits to a single command.
- Covered delivered functionality with pytest unit and integration tests against an isolated database, maintaining approximately 85% overall backend coverage.
- Established diagnostics using Grafana metrics and logs, reducing the time to localize common errors and bottlenecks from several hours to 15–20 minutes.
- Improved backend stability by fixing defects, refactoring code, and reviewing changes; maintained the Docker environment and CI/CD pipelines.

PROJECTS

Kantano - Kanban Task Manager

kantano.ru | github.com/Ilm1n/Kantano

Python · FastAPI · LangGraph · PostgreSQL · Redis · RabbitMQ · Celery · Docker

- Independently designed, developed, and launched a production service for collaborative task management.
- Implemented email verification, JWT/OAuth authentication, roles and invitations, plus board updates and presence over WebSocket, enabling real-time collaboration.
- Built a LangGraph/LangChain AI assistant with 14 typed tools and human-in-the-loop controls; data changes require user approval and permission checks.
- Moved email delivery to RabbitMQ/Celery and integrated S3, enabling asynchronous delivery and separate user-file storage.
- Added Redis caching, reducing repeated board loads from 10 to 4 SQL queries.
- Covered the backend with 300+ tests and 86% overall coverage; configured linting, type checking, and typed client generation from OpenAPI.
- Maintain the live service with CI/CD, Grafana Stack, Sentry, and automated S3 database backups for delivery, diagnostics, and recovery.

SKILLS

Backend: Python, FastAPI, asyncio, SQLAlchemy, Pydantic, REST APIs, WebSocket, pytest

Data & Messaging: PostgreSQL, Redis, RabbitMQ, Celery, Alembic

AI/LLM: LangGraph, LangChain, AI agents, LLM APIs, tool calling, human-in-the-loop

Infrastructure: Docker, Docker Compose, GitHub Actions, Caddy, Linux, Git, S3

Observability: Grafana Stack (metrics, logs, traces), OpenTelemetry, Sentry

Additional: Vue 3, TypeScript, OpenAI Codex, Claude Code

EDUCATION

Academy of Urban Environment Management, Urban Planning and Printing

2026

Diploma in Information Systems and Programming (09.02.07) · Secondary vocational education

LANGUAGES

Russian - Native · English - B2 (technical communication and documentation)
