SUMMARY

Python Developer with over a year of experience building production services with FastAPI. Designed and launched a LangGraph AI assistant for Kantano, a collaborative task management service, with LLM APIs, tool calling, persistent state, and human-in-the-loop approvals. My work combines AI development with backend engineering: API and data design, automated testing, CI/CD, and observability.

EXPERIENCE

Backend Developer - Overleng-IT LLC

May 2025 - June 2026

Academic paper compliance service · Python, FastAPI, PostgreSQL, Redis, RabbitMQ, Celery

- Built REST APIs and business logic with FastAPI for key thesis and term-paper workflows, enabling automated compliance checks against GOST requirements.
- Designed PostgreSQL models and implemented SQLAlchemy queries for new service functionality.
- Moved academic-paper checks to Celery/RabbitMQ: the API now returns a task ID in under 1 second instead of waiting 30–60 seconds for processing.
- Automated typed TypeScript client generation from OpenAPI, reducing backend–frontend API contract synchronization from 20–25 minutes of manual edits to a single command.
- Covered delivered functionality with pytest unit and integration tests against an isolated database, maintaining approximately 85% overall backend coverage.
- Established diagnostics using Grafana metrics and logs, reducing the time to localize common errors and bottlenecks from several hours to 15–20 minutes.
- Improved backend stability by fixing defects, refactoring code, and reviewing changes; maintained the Docker environment and CI/CD pipelines.

PROJECTS

Kantano - AI-powered Task Manager

kantano.ru | github.com/Ilm1n/Kantano

Python · FastAPI · LangGraph · LangChain · PostgreSQL · Redis · SSE · Docker

- Independently designed and launched a production service with JWT/OAuth, role-based access control, and real-time updates over WebSocket.
- Built a LangGraph/LangChain assistant with 14 typed tools that manages tasks, columns, and tags through tool calling after user approval and permission checks.
- Implemented dependent multi-step plans, persistent state in PostgreSQL, run recovery, and SSE streaming, preserving context across requests.
- Integrated Google Gemini, GigaChat, and OpenAI-compatible APIs with fallback across cloud models.
- Set up RabbitMQ/Celery, S3, and Redis caching; repeated board loads require 4 SQL queries instead of 10.
- Covered the backend with 300+ tests and 86% overall coverage; set up CI/CD and AI observability for LLM latency, tool calls, fallback events, and token usage.

SKILLS

Backend: Python, FastAPI, asyncio, SQLAlchemy, Pydantic, REST APIs, WebSocket, SSE, pytest

AI/LLM: LangGraph, LangChain, AI agents, LLM APIs, tool calling, human-in-the-loop

Data & Messaging: PostgreSQL, Redis, RabbitMQ, Celery, Alembic

Infrastructure: Docker, Docker Compose, GitHub Actions, Caddy, Linux, Git, S3

Observability: Grafana Stack (metrics, logs, traces), OpenTelemetry, Sentry

Additional: Vue 3, TypeScript, OpenAI Codex, Claude Code

EDUCATION

Academy of Urban Environment Management, Urban Planning and Printing

2026

Diploma in Information Systems and Programming (09.02.07) · Secondary vocational education

LANGUAGES

Russian - Native · English - B2 (technical communication and documentation)
